6

Logging in to Cisco Unified MeetingPlace Express

This chapter describes how to log in to Cisco Unified MeetingPlace Express. Topics in this section include:

- About Interfacing with Cisco Unified MeetingPlace Express, page 6-1
- About the root and mpxadmin Users, page 6-2
- About the Command-Line Interface (CLI), page 6-2
- About CLI Commands, page 6-4
- About Logging in to the Cisco Unified MeetingPlace Express Application as a System Administrator, page 6-8

About Interfacing with Cisco Unified MeetingPlace Express

There are several different ways to interact with Cisco Unified MeetingPlace Express, including the following:

End-User Interfaces
End users use the End-User Interface on the web, the telephone interface, and the Cisco Unified MeetingPlace Express service (a screen-based interface on the Cisco Unified IP Phone) to schedule and attend meetings, among other things. For complete information about end-user functionality, see the User Guide for Cisco Unified MeetingPlace Express Release 1.2 and the User Guide for Microsoft Outlook Operating with Cisco Unified MeetingPlace Express Release 1.2.

Administration Center
The Administration Center is a web-based interface for system administrators. Here they can configure, maintain, and customize the Cisco Unified MeetingPlace Express application. For complete information about the Administration Center, see the Configuration and Maintenance Guide for Cisco Unified MeetingPlace Express Release 1.2.

Console
System administrators may occasionally need to configure advanced network features and can use the console for this. You can log in to the console in two ways: as mpxadmin or as a root user. See the “About the root and mpxadmin Users” section on page 6-2 for more information on these two user types.
Command-Line Interface (CLI)

The Command-Line Interface (CLI) is used to run certain commands. Most of the functionality performed by these commands have been built in to the Cisco Unified MeetingPlace Express Administration Center so that a system administrator can perform the same functions without using the CLI.

About the root and mpxadmin Users

There are two types of administrative users: the root user and the mpxadmin user.

root User

The root user has the highest authority.

For security reasons, we do not recommend logging in directly as the root user. In the Cisco Unified MeetingPlace Express environment, we recommend that you only log in as the root user if you need to reset the root user or mpxadmin user passwords, if you need to run the infocap report, or if you need to uninstall the system.

To get to the root user level, log in as the mpxadmin user and enter `su` at the command line.

mpxadmin User

The mpxadmin user should be used whenever possible.

About the Command-Line Interface (CLI)

You can log into the CLI from the console and you can log into the CLI remotely using the SSH function. See the following sections:

- Logging in to the CLI Using the Console, page 6-2
- Logging in to the CLI Using SSH, page 6-3

Logging in to the CLI Using the Console

The console is the monitor and keyboard that are directly attached to the Cisco MCS server where your Cisco Unified MeetingPlace Express system resides.

You can log in to the CLI from the console using either the mpxadmin user or root user IDs. This is the only way you can log in directly as the root user. You can enter operating system CLI commands here.

Follow these steps to log in to the CLI using the console:

Procedure

Step 1
Go to the monitor associated with the Cisco MCS server where you installed the Cisco Unified MeetingPlace Express operating system.
The Cisco Unified MeetingPlace Express operating system login page is displayed.

**Step 2**
For the username, enter **mpxadmin**.

**Step 3**
Enter the password for the mpxadmin user. This was established during installation.

The Cisco Unified MeetingPlace Express operating system desktop appears.

**Step 4**
Right-click on the desktop and select **New Terminal**.

A command window appears. You can start entering commands. This is a Linux operating system so all commands should be either Linux commands or Cisco Unified MeetingPlace Express operating system CLI commands. See the “Running Operating System CLI Commands” section on page 6-4 for information about the operating system CLI commands.

**Step 5**
When you are finished with the command window, either enter **exit** or click the X in the top right corner.

---

**Note**
Always log out of the Cisco Unified MeetingPlace Express operating system when you are finished.

---

### Logging in to the CLI Using SSH

Only the mpxadmin user can log in to the CLI remotely using SSH. If needed, you can later switch to the root user by entering **su**.

You need a remote connection with a non-configurable terminal emulation program, such as the Windows SSH client, to log in to the CLI remotely using SSH.

The following is an example of how to log in to the CLI using SSH:

**Procedure**

**Step 1**
Go to **Start > Programs > SSH Secure Shell > Secure Shell Client**.

**Step 2**
Click **Quick Connect**.

**Step 3**
In the Connect to Remote Host dialog box, enter the following values:

- **Host Name**: IP address of your Cisco Unified MeetingPlace Express system
- **User Name**: mpxadmin
- **Port Number**: 22
- **Authentication Method**: leave as <Profile Settings>

**Step 4**
Click **Connect**.

**Step 5**
In the Enter Password dialog box, enter the password for the mpxadmin user. This was established during installation.

**Step 6**
Click **OK**.

The system displays the command line and you can now enter commands.
About CLI Commands

The Cisco Unified MeetingPlace Express system has a CLI that can run two types of commands: operating system CLI commands and application CLI commands. See the following sections:

- Running Operating System CLI Commands, page 6-4
- Running Application CLI Commands, page 6-5

Running Operating System CLI Commands

The operating system CLI contains the commands listed in Table 6-1.

Table 6-1 Operating System CLI Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mpx_sys</td>
<td>This is the “master” command and contains all of the other “mpx_” commands within it. Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express services. Syntax: `mpx_sys {start</td>
</tr>
<tr>
<td>mpx_app</td>
<td>Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express application services. Similar to the swstatus command. Syntax: `mpx_app {start</td>
</tr>
<tr>
<td>mpx_db</td>
<td>Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express database services. Syntax: `mpx_db {start</td>
</tr>
<tr>
<td>mpx_lm</td>
<td>Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express license manager services. Syntax: `mpx_lm {start</td>
</tr>
<tr>
<td>mpx_si</td>
<td>Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express system infrastructure services. Syntax: `mpx_si {start</td>
</tr>
<tr>
<td>mpx_snmp</td>
<td>Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express SNMP services. Syntax: `mpx_snmp {start</td>
</tr>
<tr>
<td>mpx_tomcat</td>
<td>Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express Tomcat services. Syntax: `mpx_tomcat {start</td>
</tr>
</tbody>
</table>
Chapter 6      Logging in to Cisco Unified MeetingPlace Express

Table 6-1      Operating System CLI Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mpx_version</td>
<td>Running this command lists all versions of Cisco Unified MeetingPlace Express that are currently installed on your system. Syntax: <strong>mpx_version</strong></td>
</tr>
<tr>
<td>mpx_webconf</td>
<td>Running this command starts, stops, or restarts all Cisco Unified MeetingPlace Express web conferencing services. Syntax: **mpx_webconf {start</td>
</tr>
</tbody>
</table>

Caution
Starting or stopping services using the **mpx_app, mpx_db, mpx_si, mpx_tomcat, or mpx_webconf** commands may cause unpredictable results on the Cisco Unified MeetingPlace Express server. Do not execute these commands unless you have been explicitly told to do so by Cisco TAC.

Because some services depend on others, if you run the mpx commands individually, you must run them in this order:
- mpx_si
- mpx_db
- mpx_lm
- mpx_app
- mpx_webconf
- mpx_tomcat

Running Application CLI Commands

Table 6-2 lists the application CLI commands.

Table 6-2      Application CLI Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>activity</td>
<td>Displays a quick, verbose, or complete status of all ports or for a range of ports. Allows you to make a test call and shows all conferences. Syntax: <strong>activity</strong></td>
</tr>
<tr>
<td>alarm</td>
<td>Shows the most important errors in the system, along with how many have occurred. Syntax: <strong>alarm</strong></td>
</tr>
</tbody>
</table>
Table 6-2  Application CLI Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ccamon</td>
<td>Monitors the Call Control Agent. Allows you to view the call statistics and set the log tracing level. Syntax: <code>ccamon</code></td>
</tr>
<tr>
<td>checklic</td>
<td>Shows the type and number of licenses installed. Note  The system may take up to 15 seconds to process this information. Syntax: <code>checklic</code></td>
</tr>
<tr>
<td>clearalarm</td>
<td>Clears either all the alarms in the alarm table or just the alarm specified. If there are any major alarms in the alarm table, the system can be configured to call the system administrator after every restart until all major alarms are deleted from the alarm table. Running this command stops the system from calling the system administrator if it is configured to do so. Syntax: `clearalarm &lt;alarm number</td>
</tr>
<tr>
<td>cptrace</td>
<td>Lists selected portions of the call processing trace log. Syntax: <code>cptrace</code></td>
</tr>
<tr>
<td>errorlog</td>
<td>Displays error messages with the following information: * date of the error * time of the error * severity (major, minor, informational, or warning) * exception code * brief description Syntax: <code>errorlog</code></td>
</tr>
<tr>
<td>exc</td>
<td>Displays the meaning of an exception code that was listed in the <code>errorlog</code> command output. Syntax: <code>exc [-v] &lt;exception code&gt;</code></td>
</tr>
</tbody>
</table>
### About CLI Commands

**infocap**

Captures configuration details and logs from the system for a particular time period. Every bug report should include this information. Run this command immediately after the event in question occurs, preferably within a day and definitely before restarting the system.

The output file is a zip file that is stored in the /tmp directory. The system gives the exact location after compiling the information.

**Note** You can also get this information by logging in to the Cisco Unified MeetingPlace Express application and going to the Administration Center. Click Services > Logs > View System Information Capture. Only use this CLI command if you are unable to get the information from the Cisco Unified MeetingPlace Express Administration Center.

**Note** You must be logged in as the root user to run this command.

**Syntax:** `infocap -b <begin date and time> -e <end date and time>`

**langinfo**

Displays information about all installed locales including the locale ID, the language code, the locale order, the locale name, the country code, and the locale version number.

**Syntax:** `langinfo`

**net**

Lists the current network configuration settings and allows you to change them after the system has been installed. Most changes take affect after restarting the system.

Use the `net` command to set the following:

- Port configuration parameters, including the primary IP address, subnet mask, secondary IP address, default gateway, MTU, and link parameters (auto-negotiation, speed, duplex).
- Hostnames
- Domain name
- DNS servers
- NTP servers
- Static routes

**Syntax:** `net`

**swstatus**

Displays information about Cisco Unified MeetingPlace Express, such as the version number, the system mode, and the status of the power supplies, as well as the list of software modules loaded in to memory and their version number and status.

**Syntax:** `swstatus`
Chapter 6  Logging in to Cisco Unified MeetingPlace Express

Table 6-2  Application CLI Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
</table>
| taccli  | Displays details on the mixer status, active meetings, participant details, and general statistics, including the following:  
  - Cisco Unified MeetingPlace Express request statistics  
  - Statistics or status for one or all channels  
  - Statistics or details for one or all conferences  
  - Mixer status, request failures, and mixer return code table  
  Also does the following:  
  - Resets Cisco Unified MeetingPlace Express request statistics  
  - Activates and deactivates tracing  
  - Shows the current date and time  
  - Starts and stops channel RTP recording  
  Syntax: taccli |
| userutil | Performs administrative functions for any user profile, including:  
  - Displays the user ID, the user name, and the profile number for the specified user.  
  - Sets a user profile to active, inactive, locked, or the group default.  
  Note  You cannot set the user ID called admin to inactive, locked, or the group default.  
  - Resets user passwords (used for the End-User Interface or Administration Center) or user profile passwords (used for the phone interface).  
  Syntax: userutil {-qpNailg} <user ID> [password]>  
  Note  The <password> parameter is only required if you use the -p or the -N argument. |

About Logging in to the Cisco Unified MeetingPlace Express Application as a System Administrator

The previous sections describe how to log in to and use the Cisco Unified MeetingPlace Express operating system. This section describes how to log in as a system administrator to the Cisco Unified MeetingPlace Express application and how to change the web password for the system administrator.

For complete information about using the Cisco Unified MeetingPlace Express Administration Center, see the Configuration and Maintenance Guide for Cisco Unified MeetingPlace Express Release 1.2.

Topics in this section include:

- Logging in to the Cisco Unified MeetingPlace Express Administration Center, page 6-9
- Changing the Default Web Password for the System Administrator, page 6-9
- Logging in to the Cisco Unified MeetingPlace Express Telephone User Interface, page 6-10
Logging in to the Cisco Unified MeetingPlace Express Administration Center

Follow the steps in this procedure to log in to the Cisco Unified MeetingPlace Express Administration Center as a system administrator for the first time.

**Procedure**

**Step 1**
On the desktop, double-click the Cisco Unified MeetingPlace Express icon.
The system should bring up the Cisco Unified MeetingPlace Express application Attend page.

**Step 2**
From the menu bar at the top of the page, click **Log In**.

**Step 3**
On the Log In page, enter the following information:

<table>
<thead>
<tr>
<th>Field</th>
<th>Value to Enter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>admin</td>
</tr>
<tr>
<td>Password</td>
<td>cisco</td>
</tr>
</tbody>
</table>

**Note**
The password is case-sensitive.

**Step 4**
Click **Log In**.

**Step 5**
From the menu bar at the top of the page, click **Administration**.

Changing the Default Web Password for the System Administrator

For security reasons, because the default password is published, we strongly encourage you to change the password for the system administrator.

**Procedure**

**Step 1**
Log in to the Administration Center of the Cisco Unified MeetingPlace Express application. See the “Logging in to the Cisco Unified MeetingPlace Express Administration Center” section on page 6-9 for complete details.

**Step 2**
On the left, click **User Configuration > User Profile Management**.

**Step 3**
Under Select Search Rule, enter **admin** in the Begins with field and click **Search**.

**Step 4**
Click **edit**.

**Step 5**
In the User password field, enter a new password. Confirm the new password by entering it again in the User password confirm field.

**Step 6**
Click **Save**.
Chapter 6  Logging in to Cisco Unified MeetingPlace Express

About Logging in to the Cisco Unified MeetingPlace Express Application as a System Administrator

Note Another way of changing the default password for the system administrator is described in the Troubleshooting Guide for Cisco Unified MeetingPlace Express Release 1.2.

Logging in to the Cisco Unified MeetingPlace Express Telephone User Interface

Follow the steps in this procedure to log in to the Cisco Unified MeetingPlace Express Telephone User Interface (TUI) as a system administrator for the first time. You can use any phone to do this.

Procedure

Step 1 Use any phone to call your Cisco Unified MeetingPlace Express system.

Note If you are unsure of the number to call, log in to Cisco Unified MeetingPlace Express on the web. The system displays the phone number to call in the top right corner.

Listen to the welcome announcement and menu options.

Step 2 To access your profile, press 2#.

Step 3 When prompted to enter your profile number, enter 0001#. This is the profile number for the system administrator.

Step 4 When prompted to enter your profile number PIN, enter 24726#.
